REMARK.
The operator must take care that the pipkin, or vessel, in which these preparations are boiled, be capable of holding at least three times the quantity of the ingredients. As soon as the mixture is nearly at the point of ebullition, it rarifies so much as certainly to run over the sides of the vessel, and flame in a dangerous manner, unless removed in time from the fire. The fire should be gentle for some time, and at length increased till the oil just bubbles, in which heat it should be kept untill all the Sulphur appears dissolved. L.
