

INDEX.

To facilitate the finding out of those names that consist of several words, it must be observed,

1. Substances deriving their names from any drug, must be sought for under that drug, provided its name be employed as a substantive, as aqua ammonia acetate, under ammonia; oil of amber, under amber.
2. The same rule is to be observed, in respect to vegetables or animals giving their names to any drug or preparation; as oleum amygdalarum is to be sought for under amygdalarum; gum juniper, under juniper.
3. In other cases the substantive is to be sought for, as acidum sulphuricum is placed under acidum; antibilious pills, under pills.
4. In regard to the English names of plants, composed of two or more words, the last is always to be searched for, as bitter-sweet, under sweet; night-shade, under shade. This rule is strictly observed even when one or other of the words is obsolete, or nearly so, in its simple form, or the composition is not apparent at first sight, as in char-lock, daber-locks, goldilock, hem-lock, tre-foil, cinq-foil, sept-foil, mil-foil, pars-ley, pars-nep, tur-nep, mary-gold, rose-mary, prim-rose, missel-toe, gilli-flower, honey-suckle, wood-roffe, fever-few, and the like.
